

SANPETE STEEL

Done Right and On Time

**NOW
OPERATING**

ProStar® Precision Shape Cutting Machine

Sanpete Steel now has a computer controlled precision plate cutting table with both plasma and oxy-fuel cutting capabilities. With plasma we can cut plate up to 1 1/2" thick or **one-inch bevels**. The depth of cut with oxy-fuel is essentially unlimited. We can handle plate as large as 108 inches by 240 inches. The machine is controlled by ProNest 8® software which can automatically nest multiple parts to increase efficiency and decrease waste, and we are equipped with AutoCAD if you need help with layout and design. If you need parts or signs — from 1 to 1,000 — with the precision of plasma or the thickness required of oxy-fuel, give us a call. **We can handle rush jobs.**
